Strategy for evaluation of eye irritation potential by using alternative methods (AMs)

Stage 1
- **Strong Irritants**
  - Use AMs?
  - Evaluate by AMs
  - Draize Test by 10% solution, lower, or higher concentration

Stage 2
- **Apparent Non-Irritant**
  - Non and Slight
  - Irritant

- **Mild Irritants**
  - Predict eye irritation potential
  - No
  - Yes
  - Selection of AMs
    - Dilute test samples
    - Information of SAR, Physico-chemical Charact., and other information like skin corrosivity

Stage 3
